

Assignment

Level : Basic

Objective : To understand constructors, class design, setter/getter methods, and method calling using a real-world order processing system.

Case Study

ABC-Master App is the Amazon like App , through which a user can placed the order of Gift items and add some other services like gift wrapping the product .

The User of the Application can add new Order based on the following conditions

- 1) User can create a Simple new order.
 - a. Product cost would be consider as final cost
- 2) User can create a Gift Wrapper new Order
 - a. User can choose one of the following gift wrapper option
 - i. None : Deliver without gift pack , Standard Packing apply
 - ii. Basic : add 1% cost as the Gift wrapper cost
 - iii. Classic : add 3% cost as the Gift wrapper cost.

Note : use switch in order to implement scenario
- 3) User can choose any one of the Payment option along with following use cases.
 - a. COD : Add 2% more on total cost as service cost
 - b. UPI : Total cost would be the final cost
 - c. Wallet Payment : Give cashback of 1% in the wallet.

Following is the class type

```
2
3 public class AppOrder {
4
5     private String username;
6     private String productName;
7     private int price;
8     private int giftPackCost;
9     private String packingType; // basic , gift wrap basic , gift wrap classic
10    private int totalCost;
11    private String paymentMode; // COD , UPI , App Wallet
12    private int walletBalance = 0;
13
14 }
15
```

Implement the following business logic using Constructor and Setter & Getter Methods

Default Constructor	Not available
Parameterized Constructor – 1	AppOrder(productName,price,packingType,paymentMode)
Method to Set the Wallet Balance if any	setWalletBalance(int walletBalance)
Method to Get the Wallet Balance	Int getWalletBalance()
Method to calculate Payment and process the order	Public String processOrder()

- A) User can only make payment from Wallet , if wallet balance has more than 300/- Rs. Otherwise application should promot an error msg like below

Hi , Kavita Your Wallet balance is Less than 300/- Rs. Click here to add the balance

Note: assume that Kavita is the loggedin User Name

- B) If Your Placed the Order Print the User Order Details like below , assume that user made payment through wallet and wallet balance was 15000 before payment.

Hi Kavita , Thanks for the Order below is the Order Details

Username	:	Miss. Kavita
Product Name	:	Smart Phone
Cost	:	10,000 Rs.
Gift Wrap	:	Classic
Amount to be Paid	:	10,300 Rs.
Payment Mode	:	Wallet
Wallet balance	:	4700
Cashback 1%	:	0047
Net Balance	:	4747

Note : You can call setWalletBalance in order to execute cashback , you can use Single String in order to return the order details
